Fracture Systems

Capability statement

Systems architecture and implementation for financial-services firms in transition

When firms acquire, merge, migrate, or scale, their systems fracture: duplicated data, broken integrations, manual workarounds. We find the real infrastructure gaps, design the target architecture, and build it.

Core competencies

Enterprise architecture
Target-state design, systems inventory, and integration mapping.

Data migration
CRM and custodian migrations: mapping, reconciliation, cutover.

Integration engineering
APIs, workflow automation, and reporting across the stack.

M&A and roll-up integration
Post-acquisition consolidation of systems, entities, and data.

Platform design
Operating platforms built to absorb the next acquisition.

Intelligent automation
Context-aware, guard-railed AI inside regulated workflows.

Selected experience

- Delivered a firm-wide data platform: custom application, workflow integrations, and departmental dashboards on the Microsoft stack.
- Solution architect on enterprise client-lifecycle platform implementations for global financial institutions.
- Designed and built Exit Blueprint, a deal-readiness scoring platform for M&A advisors preparing businesses for sale.

Fracture Systems Consulting LLC

Winter Garden, Florida

NAICS 541512, 541511, 541611

Transitions we handle

Acquisitions and mergers

Roll-up consolidation

CRM migrations

Custodian migrations

Rapid expansion

Why Fracture

Architect-led. Detailed design processes reduce surprises.

Evidence first. Every finding traced to source systems.

Breadth. Experience across banks, wealth managers, fund administrators, and M&A firms.

How we engage

1 Conversation
Free, 20 to 30 minutes on what changed and what it costs.

2 Assessment
Fixed fee, 1 to 2 weeks. Findings, target architecture, roadmap.

3 Implementation
Built to the approved architecture, with milestones and acceptance criteria.

4 Support
Warranty period, then an optional retainer.
