F FRACTURE SYSTEMS CONSULTING LLC

Systems architecture and implementation for financial-services firms in transition

When firms acquire, merge, migrate, or scale, their systems fracture: duplicated data, broken integrations, manual workarounds. We find the real infrastructure gaps, design the target architecture, and build it.

CORE COMPETENCIES

What we design and build

Enterprise architecture
Target-state design, systems inventory, and integration mapping.

M&A and roll-up integration
Post-acquisition consolidation of systems, entities, and data.
For acquirers: the roll-up operating model

Data migration
CRM and custodian migrations: mapping, reconciliation, cutover.

Platform design
Operating platforms built to absorb the next acquisition.

Integration engineering
APIs, workflow automation, and reporting across the stack.

Intelligent automation
Context-aware, guard-railed AI inside regulated workflows.

TRANSITIONS WE HANDLE

Acquisitions and mergers · Roll-up consolidation · CRM migrations · Custodian migrations · Rapid expansion

WHY FRACTURE

Architect-led
Detailed design processes reduce surprises.

Evidence first
Every finding traced to source systems.

Breadth
Experience across banks, wealth managers, fund administrators, and M&A firms.

SELECTED EXPERIENCE

Delivered a firm-wide data platform: custom application, workflow integrations, and departmental dashboards on the Microsoft stack.

Solution architect on enterprise client-lifecycle platform implementations for global financial institutions.

Designed and built ExitBlueprint, a deal-readiness scoring platform for M&A advisors preparing businesses for sale.

HOW WE ENGAGE

1 · Conversation	2 · Assessment	3 · Implementation	4 · Support
Free, 20 to 30 minutes on what changed and what it costs	Fixed fee, 1 to 2 weeks Findings, target architecture, roadmap.	Built to the approved architecture with milestones and acceptance criteria	Warranty period then an optional retainer
